Why work as a Project Manager at Sempro?

- Work for a great company with competitive solutions in de semicon industry
- An opportunity to be responsible for the growth of Sempro
- You can make the difference for Sempro
- You can grow with the company

The Job

As a Project Manager at Sempro, you have the responsibility to work in the industry (It is not account restricted) to manage the projects beneficial for all parties. Work together with and stimulate colleagues to create smart solutions for complex questions, be creative and fulfil customer wishes within the project scope whereby it is expected to play a proactive role together with your colleagues to make sure you get the best results and achieve the set goals (targets).

Current sales locations are Asia, Europe and the USA, whereby Asia is the fastest growing market. On average you will be traveling 10% of your time, maintaining strong relationships with our customers abroad.

Most of the time our customers know what they want or need and will share the required information with us. In other cases you have to dig deeper to uncover the necessary information in order to create possible solutions which fit their budget and requirements. The time to market is of great importance to our customers and you will discuss leadtimes and create alternatives in case more urgency is needed. You will study the specifications and judicial aspects and advise management about this.

Your key responsibilities

- Establish the project plan baseline: define project scope, secure the necessary resources and plans and monitor all activities
- Drive project execution: track project activities, monitor and handle changes, conflicts and critical issues
- Work together with the customer project engineers and managers and manage the customer relationship; building confidence and trust, ensure project progress arranging meetings and customer events
- Handle project finance: ensure financial system monitoring
- Develop the CPM discipline: simplify processes, methods and tools with creative ideas
- Manage the technical supply chain and arrange with the administration orders will be placed timely against the right budget. Follow up technical issue's and planning.
- Manage the supply chain in such a way orders are delivered within the right time frame and quality.
- Report to the MD

Your qualifications

You have a college/bachelor's degree or higher in technical education, with at least 5 years of experience in Project Management in a technical environment.

Moreover, you showcase high competence in business-oriented customer engagement and influence skill. You have experience with scope management on large-scale projects and you are familiar with sales processes and compliance to Occupational Health & Safety (OHS). You also have relevant experience in project management in both hardware and software-oriented projects and services and you are familiar with project management in an agile environment.

Furthermore, possess great communication skills and you are able to setup and manage a team with colleagues from countries, backgrounds and disciplines. You are able to lead, supervise, plan and organize resources to successfully achieve project targets and win customer satisfaction.
